

On the Subject of Fractured Light

Through light that I see
Through you lies.

This module contains 2-5 of spotlights, all of which when combined correctly will form a coherent image. Unfortunately, someone has performed a devious lick and messed with the settings on the spotlights, rendering the image as incoherent.

Each spotlight is selectable, when you select it, you gain control of said spotlight via the d-pad and the dial. The former affects the horizontal and vertical placement of the affected segment, while the later affects the rotation.

The amount of segments that is present is equivalent to the amount of spotlights on the module, and the possible shapes that the module can choose can be seen below.

Once the image is successfully recreated, the module will solve, and the prankster who messed with the spotlights will be sent to the time-out corner.
