

On the subject of Cutting Order

Without chaos, there is no order.

- Using the correct row in the table, cut the wires in left to right order.
- If a voltage meter exists, use the row equivalent to the integer part of the volt reading.
- Otherwise, use the conditions listed next to the rows in the table:

Use X row if X condition is true (obviously can format it better in HTML)
use only the first true condition:

1. The serial number has D, E, A, or F in it or no other module has been solved.
2. The first wire is black.
3. The red wire is adjacent to the green wire.
4. The black wire comes before the red one.
5. The violet wire comes after the white one.
6. The orange wire is adjacent to the yellow one.
7. There are two wires in between the blue and orange wire.
8. The yellow wire is in a prime numbered position.
9. The white and black wires are adjacent
10. No other conditions apply.

R	1	0	2	Y	3	G	4	B	5	V	6	7	8
6	K	B	Y	W	V	G	4	3	2	5	0	8	7
V	K	8	6	3	B	0	W	5	4	Y	2	R	1
4	8	5	7	6	B	K	1	R	V	3	W	G	Y
6	B	Y	K	8	1	0	R	G	3	7	2	5	V
G	2	3	Y	4	6	K	B	7	0	V	8	5	R
7	G	3	0	4	5	Y	1	B	2	K	V	6	W
6	7	8	5	W	3	K	0	Y	V	R	1	B	2
1	2	5	Y	0	R	W	8	7	V	6	K	4	B
G	K	B	8	W	4	1	7	2	R	Y	6	3	0
